

# Ballistic Desk

The **Ballistic Desk** is designed to provide students with immediate protection. The armored 'Desk Top' panels can be fastened to either an existing desk or can be newly manufactured as the top of a traditional desk. Each panel has a smooth surface to support normal student curricular activities. For optimal protection, the desks can be placed strategically around the classroom. The lightweight design allows for ease of movement while providing NIJ Level III protection.

The Ballistic Desk armored panels are manufactured utilizing a proprietary blend of lightweight ballistic Kevlar and Dynemra/Spectra material. They are designed to be lightweight with non-slip handles for maximum ballistic protection during movement. The Ballistic 'Desk Top' panels can be manufactured to any size specification and are installed with a desktop quick release system.

Utilizing the desk top quick release system, the Ballistic Desk armored 'Desk Top' panel can be released from the desk in less than 4 seconds. Carry handles are strategically located on the back of each panel to allow for ease of use while in a stationary position or moving to a safe location.

## Tactical

**'SHELTR'<sup>SM</sup>**

### Training Program

Unfortunately schools and other public venues around the world are becoming a target to foreign and domestic terrorism. There are not enough law enforcement officers available to secure every location where a terrorist or terrorist organization may attack. The 'SHELTR' Training courses and Tactical Protective Gear gives the school, university, or workplace a chance to defend from an Active Threat. Safety Hazard-Emergency-Lethal Threat Response<sup>SM</sup> (SHELTR) Training provides Teachers, employees, maintenance staff and grounds keepers with training tools and techniques in which to keep their school safe. These tools and techniques teach how to "LOOK" for things that are out of the norm, "REPORT" incidents in a timely and accurate manner, and "RESPOND" if your campus or workplace becomes engaged by a threat or crisis situation.

### 'SHELTR VISION'<sup>TM</sup> Mobile Application

Developed for iPhone and Android operating systems, the SHELTR VISION<sup>TM</sup> mobile application allows direct communication with authorities while in a crisis situation. Utilizing video, sound, GPS, and an emergency location beacon, authorities monitor the situation as they speed to your location.

### PAK-Jacket<sup>TM</sup> System ([www.pakjacket.com](http://www.pakjacket.com))

The 'Protect a Kid'<sup>TM</sup> Jacket (PAK-Jacket) System is designed for individual mobile protection. Manufactured to NIJ-IIIA ballistic standards, the PAK-Jacket System will provide protection from .22, .38, .44, and 9mm rounds. In addition, the jackets are fire retardant, cut resistant, razor/slash resistant, and stab proof. Each jacket includes Kevlar gloves, high heat intensity goggles, vacuum sealed first aid kits, and a high decibel whistle. The PAK-Jacket System is a versatile option for safety and protection from a variety of emergencies, crisis and threat situations.

### Blast Boards ([www.blastboards.com](http://www.blastboards.com))

The Blast Board is a ballistic white board that provides NIJ IIA Ballistic Protection. The boards can be fastened in place of an existing whiteboard/chalkboard or be purchased as a stand alone product. "Wall Mounted" Blast Boards are mounted with a single point quick release system that lowers the board to the ground in less than 3 seconds. The back of each board is equipped with multiple non-slip handles to provide users with protection while moving to a safe location. The blast board also provides superior protection when used as a shield in the classroom safe area.
